INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/EP2004/000464

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1 - 4	YES
	Claims		NO
Inventive step (IS)	Claims	1 - 4	YES
	Claims		NO
Industrial applicability (IA)	Claims	1 - 4	YES
	Claims		NO

2. Citations and explanations (Rule 70.7)

Reference is made to the following documents:

D1: US 5 615 733

D2: EP 1 123 734

Document D1, which is considered to be the prior art closest to the subject matter of claims 1 and 2, discloses the following (the references in parentheses are to D1):

A system for diagnosing blockages in channels of a heat exchanger, with a temperature sensor mounted inside the heat exchanger.

The subject matter of claims 1 and 2 differs from the known system in that the sensor is mounted on the outside of the heat exchanger, and in that the heat exchanger is a micro-heat exchanger.

The subject matter of claims 1 and 2 is therefore novel (PCT Article 33(2)).

The problem addressed by the present invention can thus be seen as that of how to diagnose a blockage in a micro-heat

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

exchanger with temperature sensors that cannot impede the flow.

The solution proposed in claims 1 and 2 of the application involves an inventive step (PCT Article 33(3)) because there is nothing anywhere in the available prior art to suggest mounting sensors of this type on the outside of a heat exchanger.

Claims 3 and 4 derive directly from claims 1 and 2 and therefore also meet the PCT requirements in respect of novelty and inventive step.
